1. Introduction

The Detcon SiteWatch Gateway is a tool for remote notification of alarms for devices connected to a Detcon X40 or MCX-32 controller. Using an Ethernet or cellular connection, the SiteWatch Gateway sends emails when a device connected to the network is in alarm or fault. The Ethernet connection provides a web interface for convenient monitoring and viewing of the entire network and each device’s state.

The SiteWatch Gateway is available in two stand-alone enclosures and as a built in accessory to a Detcon controller. The Typical SiteWatch standalone unit derives its power from the controller, while the Smart Wireless (SW) SiteWatch utilizes an RXT-320 Transceiver for communications, and derives its power from either customer provided AC or DC. All versions offer the ability to communicate via Ethernet or cellular. A simple selector switch allows the user to change between Ethernet and cellular communication.

2. SiteWatch Gateway Installation and Configuration

2.1 Typical SiteWatch Connection to Controller

1. If the SiteWatch supplied in its own enclosure, then it includes a power/Modbus cable to connect it to the X40 or MCX-32 controller. Connect this cable to the circular connector on the bottom of the SiteWatch enclosure (Figure 1). If the SiteWatch is built in to the X40 or MCX-32, then no additional cabling is needed. Skip to Section 2.3 (Ethernet Interface).
2. Connect the other end of the cable to the terminals inside the X40 or MCX-32. The red and black wires connect to the Master Port “+” and “-” terminals (Figure 2). The blue and white wires connect to the Slave Port “A” and “B” terminals (Figure 3).

![Master Port Terminals](image)

**Figure 2 Master Port Terminals**

![Slave Port Terminals](image)

**Figure 3 Slave Port Terminals**

### 2.2 SW Site Watch

The Smart Wireless (SW) SiteWatch is a standalone unit that communicates with the controller through Detcon’s Smart Wireless transceivers. The SW SiteWatch unit needs to be connected to either 24VDC, 110/220VAC, or both.

1. Mount the Smart Wireless SiteWatch securely on a smooth surface according to the diagram in Figure 4. Ensure to leave enough overhead room for the antenna’s, and ensure that there is nothing that can impede the unit from clear transmission or reception.
2. Connect incoming AC power to the terminal blocks labeled “VAC (L1)”, “NEU (L2)”, and “GROUND”).

3. Optionally connect 24VDC to the terminal Blocks labeled “24VDC” and “DC Comm”.

4. When power has been connected to the unit, apply power by turning on the associated circuit breakers.
5. If the RXT-320 has been wired properly, the unit will start communication with the controller and will operate normally. Refer to the controller manual for more information on the operational setup of the RXT-320 used for intercommunication with the controller.

NOTE The unit should come from the factory with the RXT-320 transceiver set up. Refer to the controller manual for more information on the operational setup of the RXT-320.

2.3 Ethernet Interface

2.3.1 Connecting the Ethernet Interface

1. Set the Output Selector Switch on the side of the SiteWatch to “ETH”.
2. Connect a cable from the Ethernet connector on the SiteWatch enclosure (see Figure 1) to the Local Area Network (LAN).
3. The SiteWatch Ethernet interface is configured to accept an IP address from a DHCP server. Once the Ethernet cable is connected between the SiteWatch and LAN, wait at least 60 seconds for the IP address to be assigned.

2.3.2 Determining the Ethernet Interface IP Address

Run the LSDisccovery application to determine which IP address was assigned to the Ethernet Interface (Figure 6). The LSDisccovery program can be downloaded from the Detcon website (link).

2. Select the IP address of the SiteWatch and click “Open Web Interface”
3. The SiteWatch web page will open. Click the Configuration tab in the upper right corner of the web page.
4. Use the following credentials to log into the SiteWatch Gateway for the first time:
   a. User: admin
   b. Password: password
2.4 Configuring the Modbus Port

1. After logging into the SiteWatch Gateway, the Modbus Port needs to be configured. Navigate to the “Configuration” page using the menu at the top of the screen. The default settings for “Device Configuration” are as follows and should correctly establish communication to the X40 or MCX-32 controller:
   a. Slave address: 1
   b. Baud rate: 9600
   c. Response timeout (ms): 1000

![Device Configuration](image.png)

Figure 7 Device Configuration

2. Once these values are verified, navigate to the “Dashboard” page using the menu at the top of the screen.

   If the dashboard displays an error message (Figure 8), ensure the X40 or MCX-32 controller is properly configured and the Modbus/power cable is correctly connected.

![Dashboard Error](image.png)
2.5 Email Configuration

1. Click the “Configuration” menu button to navigate to the “Configuration” page.
2. Click “Site Config” and enter the details of the location and user information for the SiteWatch Gateway. Note that the email addresses and users defined here will be used in the “Email Configuration” page.
3. Click the “Apply” button to save the changes to the device.
4. Click “Email Config” along the left-hand side to access the Email Configuration page.
5. Obtain the credentials and information for the SMTP server to be used for sending alarm and fault emails.
   a. SMTP Server Hostname: the hostname of the SMTP server to be used (example: smtp.gmail.com)
   b. SMTP Server Port: the port used by the SMTP server for incoming connections. Typically port 25.
   c. SMTP Authentication: if a username and password are required for sending emails (typical), enter the credentials here.
   d. Sender’s email address: the email address of the sender. Typically an email address associated with the company name. However, it can be any valid email address. (example: SiteWatch1@detcon.com)
   e. Recipient: the recipients of alarm emails. Check these boxes if you want the user to receive alarm and fault emails. If a user is not listed, navigate to the “Site Configuration” page and add them.
6. Click “Apply” to save the changes. The configuration of the SiteWatch Gateway is now complete.

2.6 Cellular Modem

If the cellular modem in the SiteWatch is being used for communication, follow the steps below. If the cellular modem is not installed or is not being used, this section may be skipped.

2.6.1 Installing the SIM Card

1. Place the SiteWatch Gateway in an area with good connectivity to the cellular network. If the quality of connectivity cannot be determined, proceed with the installation and configuration steps. The signal strength for the cellular network can be determined once the system is configured.
2. Insert the SIM card provided by the cellular carrier by unscrewing the two screws shown in Figure 9. Remove the plate, and push the SIM card into its slot. Re-attach the plate using the two screws.
2.6.2 Configuring the Cellular Modem

1. Set the Output Selector Switch on the side of the SiteWatch to “CELL” (see Error! Reference source not found.).
2. Disconnect the Ethernet cable from the Serial Gateway (see Figure 10). Connect it to the Ethernet port on a PC or laptop. The PC or laptop must be disconnected from any networks (LAN or wireless).

3. Open Internet Explorer (or an equivalent internet browser) and navigate to 192.168.2.1, the default IP address of the Cellular Router.
4. At the Login screen, log onto the modem with the following credentials:
   a. User: admin
   b. Password: admin
5. From the Web Management software’s menu bar, select Wizard Setup.
6. On the Wizard Setup page, modify the following parameters:
   a. DNS – 8.8.8.8
   b. Enable PPP by selecting the Enable radio button.
   c. Set “Idle Timeout” to 0 to enable a continuously-active cellular link.
   d. Enter the APN (Access Point Name) provided by the wireless carrier.
   e. All other configuration settings can be left at their default values.
   f. Press the SUBMIT button to submit the changes to the cellular modem.
7. On the top menu bar, click Save & Restart. The modem will reboot itself and enable the changes.
2.6.3 Connecting to the Cellular Network

1. After the modem is rebooted, navigate to it again at address 192.168.2.1.
2. At the Login screen, again log onto the modem with the following credentials:
   a. User: **admin**
   b. Password: **admin**

Verify the connection to a cellular network by visually inspecting the SIGNAL status LEDs on the front of the modem, as shown in Figure 11. It may take a few minutes for the connection to be established.

![Figure 11 Modem Cellular Signal Indicator](image)

4. Figure 12). If not, it may be necessary to move the unit to where cellular signal strength is higher. A phone from the same cellular provider can also be used to test general signal strength, if the modem is not connecting.

![Figure 12 WAN Interface](image)
5. Once the modem is connected to an external cellular network, the system is ready to operate. Reconnect the Ethernet cable to the Serial Gateway.
3. SiteWatch Gateway Web Pages

The web pages on the SiteWatch Gateway can only be accessed through the Ethernet interface. The web pages are not available when the cell modem is used. To access the web pages, confirm that the Ethernet cable is connected from the SiteWatch to the LAN. Then open an Internet browser and navigate to the IP address that was determined in Section 2.3.2.

NOTE The web pages can only be viewed through the Ethernet interface. They are not available via a cellular connection.

3.1 Home Page

The Home Page is the entry point for the SiteWatch Gateway. When a user accesses the device, this page is displayed.

![Figure 13 Home Page](image)

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Site/Facility</td>
<td>The facility name as defined in the Site Configuration page.</td>
</tr>
<tr>
<td>Serial No.</td>
<td>The serial number of the SiteWatch Gateway, as defined in the Site Configuration page.</td>
</tr>
<tr>
<td>IP Address</td>
<td>The current IP address of the SiteWatch Gateway.</td>
</tr>
<tr>
<td>MAC Address</td>
<td>The MAC address of the SiteWatch Gateway. This value will not change during the life of the unit.</td>
</tr>
<tr>
<td>Modbus Status</td>
<td>The current status of the Modbus connection to the controller. Values are: “OK” or “Warning: Not responding”. If the controller cannot be accessed via Modbus, the warning will appear.</td>
</tr>
<tr>
<td>Unit Uptime</td>
<td>The amount of time the SiteWatch Gateway has been running.</td>
</tr>
</tbody>
</table>
3.2 Dashboard Page

The Dashboard page provides a single user interface for monitoring all devices in the gas detection system. It displays information for each device as read from the X40 or MCX-32 controller and is updated on a periodic basis. To access the Dashboard page, click the “Dashboard” tab at the top of the screen. Enter the default username (“admin”) and password (“password”) when prompted.

The Dashboard page automatically refreshes every 15 seconds, displaying the latest data from the controller. If communication between the SiteWatch Gateway and the controller is lost, a message will be displayed at the top of the page reading “Error: Communication fault to controller. Displaying last known values.”. If this message is present, check the wiring to the X40 or MCX-32 controller and ensure the SiteWatch Gateway is configured properly. No alarms or faults will be reported by the SiteWatch Gateway during this error. The X40 or MCX-32 controller will continue functioning normally, unless it encountered a problem itself.

The columns display the following information:

<table>
<thead>
<tr>
<th>Column</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type</td>
<td>Type of device</td>
<td>Supported types are: Sensor, CXT Sensor, Alarm Station, Repeater, HMI</td>
</tr>
<tr>
<td>Serial Number</td>
<td>Serial number reported by the device</td>
<td>Serial numbers are not displayed for 320 SmartWireless Mesh Safety Networks.</td>
</tr>
<tr>
<td>Location/Name</td>
<td>Device name or location</td>
<td></td>
</tr>
<tr>
<td>Concentration</td>
<td>Current reported concentration of sensor</td>
<td>Only applies to Sensor devices.</td>
</tr>
<tr>
<td>Gas Type</td>
<td>Current reported units and gas type of sensor</td>
<td>Only applies to Sensor devices.</td>
</tr>
<tr>
<td>Column</td>
<td>Description</td>
<td>Notes</td>
</tr>
<tr>
<td>------------</td>
<td>--------------------------------------------------</td>
<td>----------------------------------------------------------------------</td>
</tr>
<tr>
<td>Alarm</td>
<td>Current level of alarm for the sensor device.</td>
<td>Only applies to Sensor and Alarm Station devices. Alarm 3 is highest priority, followed by Alarm 2, and Alarm 1 is lowest.</td>
</tr>
<tr>
<td>Status</td>
<td>Current fault status of the Sensor device.</td>
<td>Only applies to Sensor and Alarm Station devices. Supported faults are: Sensor Fault (FAULT) Communication Error (COMM ERROR) Offline (Offline) Device in Calibration (CAL) Low Battery (LOW BATT) Battery Error (BATT ERR)</td>
</tr>
<tr>
<td>Battery Life</td>
<td>Battery life (in days or %) reported by the device</td>
<td>Alarm stations report battery life in percent. All other devices report battery life in days. Devices without battery life report “DC POWER” for this column.</td>
</tr>
<tr>
<td>Link Quality</td>
<td>Wireless link quality reported by the device.</td>
<td></td>
</tr>
</tbody>
</table>

When a device is in alarm or fault, an email is sent to the users defined on the Email Configuration page.
3.3 Configuration Pages

3.3.1 Device Configuration Page

The Device Configuration page provides configuration options for communicating to the controller.

![Device Configuration Page]

**Figure 15 Device Configuration Page**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
</table>
| Slave Address | The Modbus address of the controller, which acts a Modbus slave to the SiteWatch Gateway. | Valid Values: 1-255  
                             Default value: 1 |
| Baud Rate     | Baud rate of the serial connection between the SiteWatch Gateway and the controller. | Valid values: 1200, 2400, 4800, 9600, 19200, 38400, 57600, 115200  
                             Default value: 9600 |
| Response Timeout | Maximum amount of time (in milliseconds) the SiteWatch Gateway will wait for the controller to respond to a Modbus request. | Valid values: 100-5000  
                             Default value: 1000 (ms) |
3.3.2 Network Configuration Page

The Network Configuration page provides configuration options for the SiteWatch Gateway’s Ethernet network.

There are two radio buttons on the page for setting the method by which the SiteWatch Gateway receives an IP address.

<table>
<thead>
<tr>
<th>Radio Button</th>
<th>Description</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Obtain an IP address automatically</td>
<td>The SiteWatch Gateway will automatically retrieve its IP address from an available DHCP server. There must be a DHCP server on the network capable of serving IP addresses.</td>
<td>This is the default setting for a SiteWatch Gateway.</td>
</tr>
<tr>
<td>Use the following IP address</td>
<td>Allows the user to manually set an IP address for the SiteWatch Gateway.</td>
<td></td>
</tr>
</tbody>
</table>

If the second radio button is selected, the following configuration items become available. Only modify these settings if you are sure of their use.

<table>
<thead>

<td></td>
</tr>
</tbody>
</table>
3.3.6 Firmware Page

The Firmware page provides a means to upload a new firmware image to the SiteWatch Gateway. **Care must be taken in uploading a new firmware image as the device can be irreparably damaged if the firmware upload is interrupted.**
3.3.7 Reboot Page
The Reboot page provides a button to initiate a software reboot to the SiteWatch Gateway. No data will be lost upon rebooting the Gateway.

<tbody>
<tr>
<td>NOTE</td>
<td>The SiteWatch Gateway should only be repaired by Detcon personnel or a Detcon trained representative.</td>
</tr>
</tbody>
</table>
5. Warranty Notice

Detcon Inc. warrants the SiteWatch Gateway to be free from defects in workmanship of material under normal use and service for one year from the date of shipment on the transceiver electronics.

Detcon Inc. will repair or replace without charge any such equipment found to be defective during the warranty period. Full determination of the nature of, and responsibility for, defective or damaged equipment will be made by Detcon Inc. personnel.

Defective or damaged equipment must be shipped to the Detcon Inc. factory or representative from which the original shipment was made. In all cases, this warranty is limited to the cost of the equipment supplied by Detcon Inc. The customer will assume all liability for the misuse of this equipment by its employees or other contracted personnel.

All warranties are contingent upon the proper use in the application for which the product was intended and does not cover products which have been modified or repaired without Detcon Inc. approval, or which have been subjected to neglect, accident, improper installation or application, or on which the original identification marks have been removed or altered.

Except for the express warranty stated above, Detcon Inc. disclaims all warranties with regard to the products sold. Including all implied warranties of merchantability and fitness and the express warranties stated herein are in lieu of all obligations or liabilities on the part of Detcon Inc. for damages including, but not limited to, consequential damages arising out of, or in connection with, the performance of the product.

Detcon, Inc. reserves the right to refund the original purchase price in lieu of product replacement.
6. Appendix

6.1 Specifications

System Specifications
Controllers Supported: Model X40 and MCX-32
Capacity: 32 Channels (X40), 64 Channels (MCX-32)
Input: RS-485 Modbus RTU
(SW SiteWatch) 110-220VAC @ <1A, 24VDC @ <1A
Outputs: Ethernet or Cellular
Warranty: One year

Environmental Specifications
Operating Temperature: 0C to +60C
Storage Temperature: -40C to +85C
Humidity: 5-90%RH, non-condensing
Altitude: 0 -2000m

Electrical Specifications
Input Voltage: 9-30VDC
Power Consumption: 1.81A @ 9V max.
Electrical Classification: NEMA 4X

Mechanical Specifications
Dimensions
(Fiberglass Enclosure):
  SiteWatch 7.7" W x 9.6" H x 6" D
