

New Product Announcement

FOR IMMEDIATE RELEASE: SEPTEMBER 29, 2011

Detcon Introduces Expanded 64 Channel Remote Display Unit

Detcon's new Model RD-64X is a read-only remote display unit designed to monitor real time status of a wide range of gas detection sensors and controllers. The expanded 64-channel system is now being manufactured in place of Detcon's 32-channel Model RD-32X. Like its predecessor, the new remote display unit communicates using Modbus™ RS-485 RTU protocol and operates as a Modbus Master. The Model RD-64X features a non-intrusive magnetic interface and backlit LCD that simplifies operation and configuration. During normal operation the unit displays real-time status for up to eight field devices simultaneously and continuously auto cycles through each active channel screen for constant, up-to-date readings. Multiple remote display units can be linked for monitoring in different locations.

Among the system's unique features is a wireless option that can be used with Detcon's RXT-320 SmartWireless® transceivers. Multiple remotes can be linked for monitoring in multiple locations. Enclosure options include NEMA 4X powered by either 110/220VAC or 24 VDC using an internal power supply and NEMA 7 powered by 11.5-30VDC using an external voltage source. For more information on Detcon products visit www.detcon.com or contact sales@detcon.com.
